P1 Report

Everything went well while setting the project up for the most part, except setting up the shared folder, I simply had to give my user access on the vm, so that I could change into the directory. I also ran into the problem of not being able to run my code with my name appearing, after looking into the campuswire discussions, I found that this is because I was running on the shared folder, so I copied my code into another folder and ran from there and it worked perfectly.
